

Residents of West Pittston please be advised that the recent realignment and construction at corner of Exeter Ave. and bridge was done to make it safer for pedestrians to cross at this intersection. Prior to this adjustment the span of road that a pedestrian had to cross was a much greater length than it is now. The improvements include enhanced street lighting. These improvements have contributed to a make the intersection more pedestrian friendly and West Pittston a more walkable community. The importance of it and what we all want as a community is to keep walkways and crosswalks pedestrian safe.
